

Installation Instructions: MS-970 Coiled Pipe Marker

The MS-970 coiled plastic pipe markers in styles TM and A thru E are installed easily around the appropriate pipe size. These markers are ideal for dirty or sweating pipes where adhesive labels cannot be used. The coiled construction snaps quickly around pipes, and the adhesive strip (styles C thru E) keeps the marker in place even around vertical pipes. They can also be removed and reused. Markers should be clean and dry for optimal application.

1

Place marker around pipe

2

Ensure the arrow is oriented in correct direction

3

Pull back small corner of the top strip liner, creating a small tab

4

Start wrapping with the non adhesive end of the marker against the pipe

Installation Instructions: MS-970 Coiled Pipe Marker

5

Pull marker tightly around the pipe and pinch to hold in place

6

While holding the marker, grab the corner tab

7

Remove liner from the tape strip to expose adhesive

8

Press the adhesive tape strip against the marker face to seal
