AIM MOBILE TECHNOLOGY

A USER-FRIENDLY ASSET & DOCUMENT MANAGEMENT APPLICATION

*AIM asset database and linked QR-coded tag example

AIM Mobile Technology is a user-friendly asset and document management application built for safer and more efficient operations. It allows service technicians and auditors the ability to upload documents to a secure asset database and access them by simply scanning the associated QR-coded tag in the field. The document and forms database can include anything that fits your needs. Common items included in the database are:
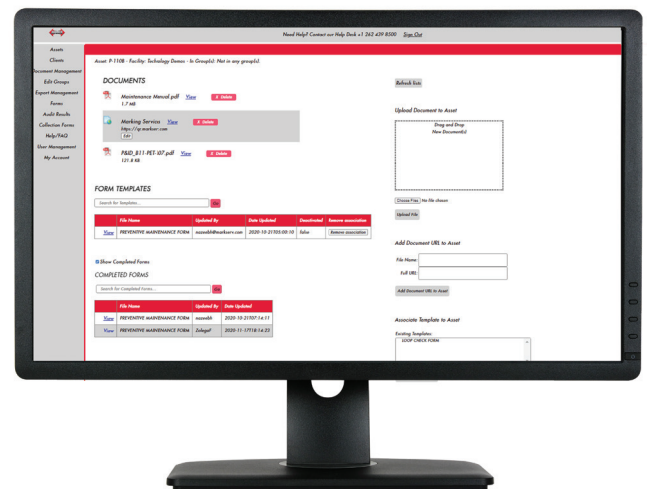

- Customized **AIM Forms**
- Work Orders
- Preventative Maintenance Orders
- Inspection Checklists
- Maintenance & Service Manuals
- Schematics
- Drawings
- Commissioning Reports
- Warranty Information

More than a mobile app for field personnel, AIM is also available as a browser-based desktop portal for administrative and operational functionality. This gives administrative access and control to see information within the database such as completed forms, rounds forms, work orders, time-stamped checklists and more in real time.

Don't have time to upload documents yourself? Our **AIM Services** team will data mine and digitize required documents, perform field survey audits to identify and validate assets, tag all assets, validate and upload documents, and maintain the AIM database to keep it compliance ready.

Within AIM there is also the ability to create unique user groups with unlimited users as well as no service, maintenance, software or user fees.
